

# AT&T's 4G Evolution

We're rolling out 4G LTE across our network footprint, with availability in 26 markets. 4G LTE offers customers mobile broadband speeds comparable to many home Internet connections – but it won't be ubiquitous for quite some time. That's why we've also added a complementary technology – HSPA+ – that, when combined with fiber backhaul, provides 4G speeds that are up to four times faster than our already fast mobile broadband speeds. As our 4G LTE footprint continues to grow, customers with compatible devices outside of 4G LTE areas will still have access to consistently fast mobile broadband speeds through HSPA+. That's something our competitors can't match.

## 4G LTE Markets:

- \* Athens (GA)
- \* Atlanta
- \* Austin
- \* Baltimore
- \* Boston
- \* Chapel Hill (NC)
- \* Charlotte
- \* Chicago
- \* Dallas-Fort Worth
- \* Houston
- \* Indianapolis
- \* Kansas City
- \* Los Angeles
- \* Las Vegas
- \* New York City
- \* Oklahoma City
- \* Oakland (CA)
- \* Orlando
- \* Phoenix
- \* Raleigh
- \* San Antonio
- \* San Diego
- \* San Francisco
- \* San Jose (CA)
- \* San Juan, Puerto Rico
- \* Washington, D.C.

AT&T has made five speed upgrades in recent years to provide our customers with consistently fast speeds before, during, and after LTE deployment. Other carriers can't say the same.

100

Virtually 100 percent of AT&T's mobile broadband network is covered by HSPA+, which, when combined with enhanced backhaul, enables 4G speeds

80

percent of mobile data traffic runs over enhanced fiber backhaul

26

AT&T 4G LTE now available in 26 markets

74

million Americans currently have access to AT&T 4G LTE

24

4G devices added to AT&T's already robust device portfolio in 2011, with some of those devices being 4G LTE compatible

## LTE + HSPA+

### Award-winning mobile broadband deployment strategy\*

#### Gizmodo

"The Results Are In: AT&T's LTE is Fast as Blazing Hell"

#### PC Magazine

"Watch out, Verizon. There's a new fastest network in town: AT&T's LTE. ... Just as exciting as the sheer download speeds were the connection quality results."

#### Houston Chronicle

"AT&T's first LTE smartphones are almost too fast. Almost. ... Sometimes, the results...were almost beyond belief."

\*AT&T's strategy to deploy HSPA+ and LTE technologies awarded Frost and Sullivan's 2011 North American Product Line Strategy Award in the Mobile Network Market
