TEXTING & DRIVING...
it can wait

Please help us in spreading AT&T's simple yet effective message:

When it comes to texting and driving...it can wait.

AT&T DriveMode® app is designed to curb the urge to read or send a text while driving. When the app is downloaded and enabled, an auto-reply message* will notify inbound texters/emailers that you are behind the wheel and will reply when it's safe. Set an example for others and remember when it comes to texting and driving...It can wait.

App features include:

- Customizable auto-reply message (similar to an out of office alert)
- Option to send all calls directly to voicemail
- Option to set up an "allow list" of up to five contacts who can call and be called
- Option to select one music and one navigation app that can be running while DriveMode is enabled
- Always allows 911 calls in case of emergency
- Free for AT&T BlackBerry® and Android™ customers (with more supporting operating systems planned in the coming months)

To download or learn more go to: **AT&T DriveMode® (att.com/drivemode)**

Blackberry   Android

Search for AT&T Code Scanner in your device app store. To scan a code, open AT&T Code Scanner, and the scanning screen should open. On many phones, when the application identifies a mobile barcode, it will scan it without any interaction required by the user. On some devices, such as with BlackBerry, users need to scan a code, in the same way as you would take a picture on the device.

*Data and text messaging charges may apply for download and app usage. Standard messaging rates apply to auto-reply messages. AT&T DriveMode® is free to AT&T customers only.

Compatible device required.
