

# Combining Broadband and Broadcast: Home Entertainment Service

## Features

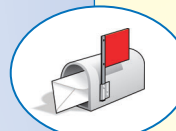

**Satellite Television.** Through an expanded agreement with EchoStar Communications, customers choose from a variety of SBC DISH Network satellite entertainment programming packages.

**Video on Demand.** Customers download and view a variety of movies that are delivered via a high-speed DSL connection from different entertainment services.

**Music on Demand.** Customers will have the ability to legally download high-quality music from online services via their DSL connections and deliver it to their home stereos, entertainment systems and networked personal computers.

**Messaging.** SBC local phone service customers will be able to view caller ID and call-log information on their television screen. Future plans include the integration of SBC Unified Communications service into the messaging functions.

**Photos.** Customers will be able to download digital photographs directly from their digital cameras to the set-top box or transfer them from a networked personal computer for viewing on their television screens.

**Remote Access.** Through any Web-connected computer, customers will have the ability to remotely program their set-top box to record satellite entertainment, download movies on demand, and access their photos and personal music collection. Customers will also be able to access files on computers connected to their home networks. Planned future enhancements include remote access using a Cingular wireless phone.
