

## HOW TO STAY IN TOUCH WITH INTERNATIONAL CALLING

International calling is on the rise in the United States.

Whether calling home from abroad or calling from within the U.S. to more than 200 countries, AT&T offers consumers the following international tips to help them stay in touch with friends and family.

Consumers can also visit <http://www.att.com> to learn more about AT&T international calling plans and services.

---

**When calling from the U.S. to international locations, consider subscribing to an international calling plan. AT&T offers a wide variety of plans that feature significant savings when compared with default and operator-assisted international rates.**

Even infrequent international callers can experience significant savings with an international calling plan from AT&T. For example, a call to Mexico City will cost \$2.71 a minute (off-peak) without an international plan — that's \$81.30 for a 30-minute call. By selecting any of AT&T's international calling plans, customers can save \$30 to \$70 on just one call.

- **AT&T Unity Worldwide Calling** provides subscribers with AT&T's best overall international long distance calling rates to more than 220 countries, including Mexico, Canada, Japan, Australia and France, from a home or a wireless phone. That is one international calling plan for AT&T home and wireless phones for a \$4.99 monthly recurring charge. Visit <http://www.att.com/unityworldwide> for more information.
- **AT&T Worldwide Value Calling** offers some of the best international calling rates from the U.S. and accommodates callers who frequently make international calls. The monthly charge of \$5 provides discounted rates for direct-dialed calls. AT&T Long Distance calling card calls from the U.S. to international locations are also available within certain calling plans, including Worldwide Value Calling for qualified customers.
- **AT&T Worldwide Occasional Calling** is designed for callers who occasionally make international calls. The monthly recurring charge is just \$1 a month, and the plan provides a discount on basic rates for direct-dial calls to more than 200 countries.

**When traveling abroad and calling the U.S. or other countries, there are several options for travelers to make calls — calling cards, wireless phones and operator-assisted calls. AT&T has several resources available to travelers who are looking for cost-effective ways to stay connected.**

**A few international plan options are listed below:**

- **AT&T World Traveler for Wireless.** For only \$5.99 a month, customers receive discounted wireless calling rates in more than 80 countries and roaming capabilities in more than 190 countries. Sample rates include 99 cents a minute in France, Germany, Italy and the United Kingdom, 59 cents a minute in Mexico and Canada and \$1.29 in Australia. Visit <http://www.att.com/wirelessinternational> for more information.
- **iPhone Global Plan.** For \$24.99 a month, this plan includes 20 MB of data usage in 29 countries, including Canada, China, Mexico and many additional countries in Europe and Asia (overage rate is \$.005/KB). Outside the 29 discounted countries, the data usage rate is \$.0195/KB. This package does *not* include domestic data and must be added to an existing iPhone domestic data plan.

- **The AT&T USADirect Savings Plan.** This plan is available to *anyone*, not just current AT&T customers. Savings of more than 50 percent are available on wired calls made to the U.S. with the AT&T USADirect® Savings Plan. For more details and to enroll, consumers can visit <http://www.att.com/traveler>.
  - Call from more than 150 countries to the U.S. for only 99 cents a minute, (35 cents a minute from Canada and Mexico), and a low 89 cents per-call service charge.

**Activating the proper wireless plan should be a part of every international traveler's pre-trip planning routine. Below are the suggested steps to help ensure proper international wireless operation:**

- Visit <http://www.att.com/wirelessinternational> to see if service is available where you will be traveling.
- Visit <http://www.att.com/travelguide> to determine if your wireless device has the frequency and wireless technology needed at your travel destination. For the best international coverage, choose a quad band world phone that operates on 850/1900 (North America) and 900/1800 (most other countries) MHz frequencies. For travel to Japan or South Korea, your phone must operate on 2100 MHz. AT&T retail stores sell devices and wireless LaptopConnect cards that operate on each of these frequencies.
- Contact AT&T wireless representatives at 866-246-4852 to activate international services on your account. Be sure to ask about data charges and plans to save costs on data usage.
- Save emergency contact numbers in your phone, as well as hotel, airline and rental car information.
- Purchase an international plug adapter to charge your phone outside the U.S.
- Familiarize yourself with international dialing. With AT&T international roaming, callers can simply dial "+" and then the country code and number from more than 190 countries worldwide. Print the [Quick Reference Guide](#) and carry it with you.
- **Tip:** When calling the U.S., the country code is "1."
