AT&T International Roaming

Here are some fast facts about AT&T’s industry-leading international footprint:

**Voice coverage in more than 225 countries.** AT&T offers the broadest international voice coverage of any U.S. carrier.

**Data coverage in more than 210 countries.** AT&T offers the broadest international data coverage of any U.S. carrier.

**Voice and data coverage on more than 250 major cruise ships** including Carnival, Royal Caribbean, Norwegian, Disney and Celebrity Cruise Lines. For a complete list, visit [www.wireless.att.com/travelguide](http://www.wireless.att.com/travelguide).

**Ultra-fast 3G network services in more than 170 countries.**

**GSM technology.** AT&T’s network uses GSM technology, which stands for Global System for Mobile communications. It is the global technology standard upon which the vast majority of the world’s wireless services operate.

**Easy to Use.** It’s easy to make a call when abroad. Simply dial “+”, the country code and the phone number (the country code for the United States is “1”). For example, a call to the U.S. would be placed by dialing +1 (xxx) xxx-xxxx. On most GSM phones, you can typically hold down the “0” key until the “+” sign appears.

**The most world phones.** AT&T offers more phones, including the iPhone, that work in more places. GSM world devices operate on international frequencies including "tri-band" devices (which operate on three of the four GSM frequencies) and "quad-band" devices (which operate on all four of the GSM frequencies, including 850/900/1800/1900 MHz). Most AT&T devices sold today are quad-band. AT&T also offers an array of devices that operate on 3G technology at 2100 MHz which is required for travel in Japan and South Korea.

**Dedicated International Customer Care.** AT&T’s specialized international help desk is available for troubleshooting or questions while traveling outside the U.S. by calling +1-916-843-4685, a free call from your wireless phone.
