Speed

EDGE: EDGE stands for **E**nhanced **D**ata **G**SM **E**nvironment and is a digital mobile phone technology that allows increased data transmission rates and improved data transmission reliability. EDGE is often called 2.5G

GPRS: Short for **G**eneral **P**acket **R**adio **S**ervice, it is a standard for wireless communications which runs at speeds up to 115 kilobits per second.

HSPA/HSDPA/HSUPA: HSPA, or High Speed Packet Access, is a general term that encompasses both HSDPA and HSUPA, which increase downlink and uplink speeds for AT&T's 3G network, respectively.

UMTS: Universal Mobile Telecommunications System, UMTS, is a GSM-based third generation (3G) cell phone technology, which is also being developed into a 4G technology. HSPA operates over UMTS.

LTE: LTE, or Long Term Evolution, is a fourth generation (4G) technology standard under development that will provide significantly increased peak data rates.
