

AT&T MOBILE SERVICE SPEED BY CELLULAR MARKET AREA

The table below sets forth data showing the ranges of actual download and upload speeds for AT&T's mass market mobile broadband Internet access services, by technology and Cellular Market Area ("CMA").

The range reported is from the 25th to the 75th percentile, which means that the 25th percentile lower bound is the value below which 25% of the test readings were, and the 75th percentile upper bound is the value below which 75% of the test readings were.

The reported information was compiled by AT&T through crowd-sourced speed test data between March 2016 and August 2016.

Data for CMAs with low population density (defined as less than 250 people per square mile) are aggregated per state and displayed in the lower section of the spreadsheet.

An entry of "I/D" signifies insufficient data to report reliable information. "I/D" entries for 4G and 3G technologies typically result from the fact that LTE coverage in the CMA/testing area precludes the use and testing of 4G and 3G service.

CMA CODE AND NAME	LTE				HSPA+/4G				HSPA/3G			
	Download Speeds (Mbps)		Upload Speeds (Mbps)		Download Speeds (Mbps)		Upload Speeds (Mbps)		Download Speeds (Mbps)		Upload Speeds (Mbps)
