AT&T MOBILE SERVICE LATENCY BY CELLULAR MARKET AREA

The table below sets forth data showing the ranges of actual latency for AT&T’s mass market mobile broadband Internet access services, by transport technology and by Cellular Market Area ("CMA").

The range reported is from the 25th to the 75th percentile, which means that the 25th percentile lower bound is the value below which 25% of the test readings were, and the 75th percentile upper bound is the value below which 75% of the test readings were.

The reported information comes from data compiled by AT&T through drive testing between March 2016 and August 2016.

Data for CMAs with low population density (defined as less than 250 people per square mile) are aggregated per state and displayed in the lower section of the spreadsheet.

An entry of “I/D” signifies Insufficient Data to report reliable information. “I/D” entries for 4G and 3G technologies typically result from the fact that LTE coverage in the CMA/testing area precludes the use and testing of 4G and 3G service.
