

# AT&T *the Connected Car*

Making Cars Smarter and Safer

## Advanced Diagnostics

Future cars will generate thousands of data points per second, providing both customers and auto dealers the information they need to predict potential vehicle issues before they happen.

## Telematics

Drivers have a wide range of security features that keep them connected and safe in the event of an emergency, including automatic crash notification, stolen vehicle tracking, and roadside assistance.

## Remote Services

Customers can control their connected vehicle from their wireless device. These remote services include locating their car in a parking lot, sending directions to the vehicle, and starting it remotely to warm up on a cold day.

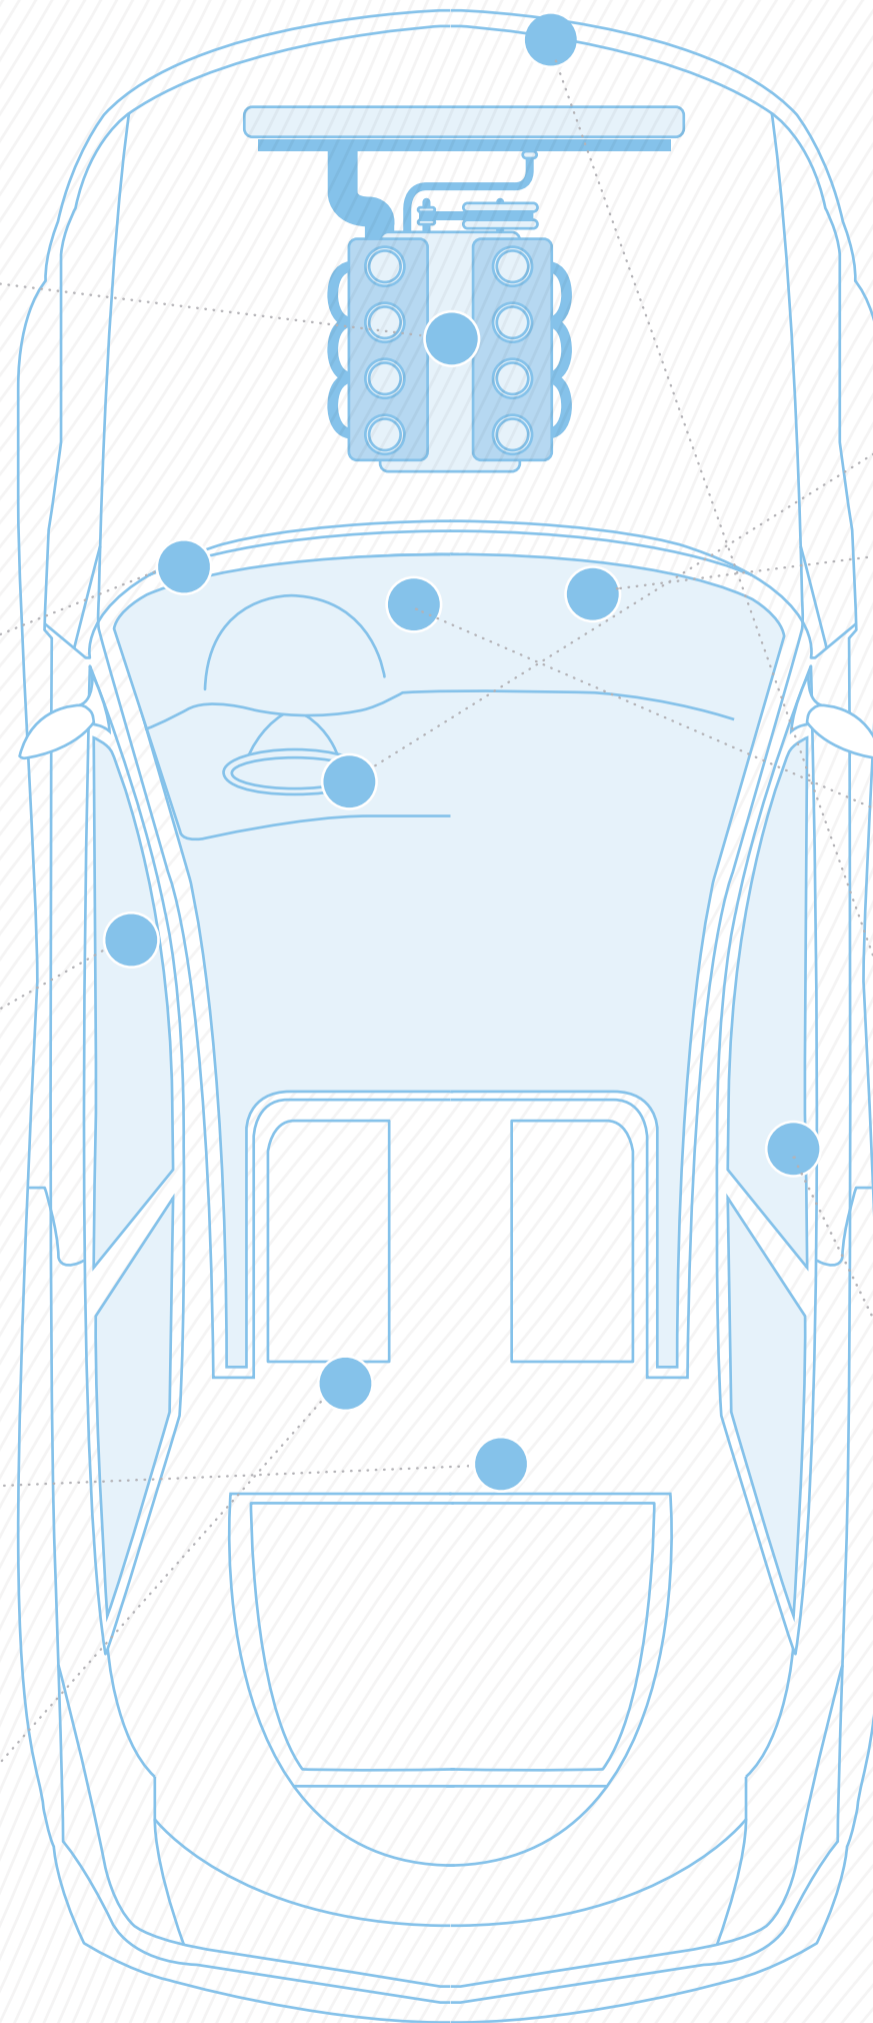

## Global Services

AT&T is working with automotive manufacturers to make connecting vehicles easy, in countries across the world.

## Rear Seat Infotainment

4G LTE speeds available via built-in mobile hotspot enables services such as Internet radio, video streaming, web browsing and more.

## Family Tracker

Receive notifications and track a young driver when they have traveled beyond predetermined boundaries or crossed a preset speed limit.

## Voice Recognition

Contextual voice control enables hands-free services and more, helping to create a safer driving experience.

## Automotive App Store

Connect and download specialized automotive applications for all your entertainment and connected vehicle needs.

## Vehicle Updates

Have your vehicle updated to the latest firmware and software without making an appointment at the dealership.

## Connected Media

Passengers can purchase and download songs, audiobooks and maps, and stream music on the go.
