

SBC PremierSERV SM Installation

The need to upgrade networks is often well understood, but deciding how to approach implementation can be far more challenging.

SBC PremierSERVSM Installation is a professional service that combines a well-trained, well-equipped integration team with a highly skilled support organization to seamlessly install and integrate your new network, while your IT staff concentrates on your daily requirements. It addresses the wide array of complications that inevitably result when you introduce new elements into an existing network.

Many service providers claim to install networking equipment. Typically technicians perform installations and consider work completed when the unit is mounted, powered-on, and blinking lights signal a successful self-test. From a pre-installation technical analysis to post-installation integration testing, quality assurance measures are embedded throughout our installation service to provide you with components that operate as expected in your network environment.

How does it work?

SBC engineers perform installation with the time, expertise, staff, and tools you need for smooth, timely installations. SBC installation services offers an experienced single point-of-contact that can minimize business interruptions and prevent the diversion of valuable internal IT resources from strategic projects. The expertise of our nationwide engineering force greatly increases the likelihood a network component will perform successfully in the complex mix of your unique network environment, budget, and timeframe.

What will it do for you?

SBC PremierSERVSM Installation gives you these features:

Component Optimization

ensure the performance of your new device

Network Stability prevent faulty equipment from impacting your network with costly downtime

Single Point of Contact simplify maintenance administration and minimize business interruptions
