Create the ideal conditions for your network to grow.

SBC PremierSERV™ Network Integration and Managed Services.
Whether your company is located within a small metropolitan area or spans across the nation, your network can mean the difference between failure and success. The SBC family of companies is a full-service network integration and managed services company.

SBC PremierSERV Network Integration and Managed Services offer design, delivery and management services from one reliable source, maximizing your return on investment and simplifying your life. There’s no need to coordinate with multiple vendors or consultants, and you get a fully integrated, fully proven nationwide network infrastructure designed with your specific business needs in mind.

Our service offerings don’t stop with designing and installing your network – we can also help you manage it once it’s in place. SBC engineers and consultants use decades of experience and expertise to help ensure that your network efficiently and reliably serves your needs now and in the future. You’ll have peace of mind knowing your network is secure from threats, whether it’s a hacker or a new federal regulatory requirement. We do our job as network professionals, so you can focus more of your resources on achieving your core business objective.
Identify weaknesses now
Optimize your network, whether it's local or branching out nationwide.

SBC PremierSERV Consulting Services can perform an independent evaluation and verification of your current network's architecture to help accurately determine how it can be improved. If your business is expanding or your network needs are increasing due to new technology, we can identify weaknesses now before they cause a problem. We also specialize in disaster recovery objectives and business continuity solutions, so you'll be able to carry on with business as usual. Our services like IT Cost Cutting Assessment and Rapid Economic Justification can show you how to reduce current operational and capital hardware costs as well as increase efficiency and performance.

We understand that you need more than just simple network connections. You also want the right amount of bandwidth delivered to the desktop so you can run your application – and your business – more efficiently. SBC PremierSERV Structured Cabling Solutions come from one of the few service providers that can bring you the bandwidth you need without having to depend on any other vendor. We also offer nationwide coverage and employ more than 65 BICSI® RCDD® (Building Industry Consulting Services International, Registered Communications Distribution Designer) certified engineers.
We look at your entire network
The speed at which business takes place today makes it vulnerable to hiccups. This is particularly true for data networking, where complicated applications must operate flawlessly, often in combination with other applications. Introducing new elements into a complex network can have consequences that are hard to predict. SBC Staging Services offer the vital safety factor of thoroughly testing components and configurations before they are implemented.

We offer extensive proof-of-concept testing to help ensure proposed network changes will work with your existing network and to verify features and functionality in new products or technologies. We don’t merely look at a device — we look at your entire network and how the devices operate and interoperate in a network scenario. This makes you aware of the implications, advantages and disadvantages of choosing a particular solution. And once everything is verified and sufficiently tested, we have the detailed knowledge and extensive experience to accurately install your network on time, on budget and with minimal disruption to your existing network infrastructure.

Network reliability depends on a strong foundation.
We can help reduce the load
SBC PremierSERV Security Services allow you to choose the security options that will best fit your organization and budget. Our services include Security Customer Premises Equipment (CPE), Intrusion Detection, Vulnerability Scanning, Firewall Administration, Virus Scanning, Content Filtering services and Security Application Support. From our comprehensive Security Network Operations Center (NOC), we track systems, networks and security to ensure the most reliable and stable hosting environment. We back all this up with leading Service Level Agreements (SLAs), so you can be confident in our ability to deliver a robust and reliable hosting solution for your organization, scaling from a single hosted server all the way to outsourcing your entire data center. The SBC Network Services team has the ability to foresee potential network issues and resolve them before they become disruptions. And the experienced SBC team can also help get your facility compliant with the latest security and privacy requirements, including the Health Insurance Portability and Accountability Act (HIPAA).
IT development projects can sometimes disrupt your day-to-day operations and distract you from your core business plan. The answer is to partner with an organization that has the staff, skills and expertise to deliver. SBC DataComm enables you to maximize the return on investment from your network infrastructure by providing every aspect of your network, from concept through implementation, monitoring and maintenance. Our staff of skilled engineers can offer a unique array of resources and experience.

We have a proven record of providing our clients with the design, delivery and management skills you need for your IT project. We have the key partnerships in place, enabling us to offer you the very best solutions and expertise to make all the components work together as planned. Our holistic, integrated approach to network infrastructures and network management translates into your peace of mind. The bottom line is that you can rely on us to design, deliver and manage your network to meet your current and future needs.

Enhance your current staff with the expertise of the SBC team.

The staff, skills and expertise to deliver
Aside from saving you money through integration and consolidation of your network services, we can help you finance your network and managed services. We offer quick credit decisions and custom financing options designed to fit your budget and specific business needs. This relieves your need to come up with large amounts of cash up front and greatly increases your overall purchasing power.

We also offer special finance rates and promotional discounts to make our solutions more affordable than ever. Our "Trade In & Trade Up" plan allows you to present and arrange a trade-in value for your old equipment, making your new CPE purchases even more accessible. These are just a few ways we can help your business get the network infrastructure and management tools you need to be successful.

Money doesn't grow on trees, but SBC Capital Services give you plenty of options.
End-to-end network management
SBC PremierSERV Network Management is a set of support solutions that provides you with a single point of contact to outsource some or all of your network support functions.

SBC PremierSERV Network Management lets us actively manage, monitor and assume responsibility for your network to ensure that it is reliable, available and efficient and that it successfully performs your critical operations. We remotely monitor your CPE, including routers, hubs and switches, from our Data Services Customer Care center. We also help ensure that your network runs smoothly with SBC PremierSERV Data and Voice CPE Support Services. You choose from four levels of service to ensure the right fit with your staff and budget needs. We can also customize a solution to suit your unique requirements. Our large staff of certified engineers takes it from there, providing you with responsive, coordinated, end-to-end integrated network management.

The SBC family of companies' long history as an industry leader makes us your logical choice for network integration and managed services. SBC engineers have earned more than 4,300 advanced certifications from the industry's leading equipment makers. We also have formal, cooperative relationships with leading system integrators and IT service firms that can be leveraged as needed to support your unique requirements. The result? Comprehensive solutions that can be easily and fully integrated with your existing applications, operations and budget.
