

A Winning Combination

iPhone 3G S, iPhone 3G and the nation's fastest 3G network

AT&T and Apple introduced the revolutionary iPhone in June 2007, and it quickly became one of the most popular devices in the AT&T wireless portfolio. On July 11, 2008, the companies launched iPhone 3G, a next-generation, 3G-enabled device.

And on June 8, Apple announced iPhone 3G S, the fastest, most powerful iPhone yet, available in the U.S. only from AT&T.

Beginning the evening of June 8, Customers may preorder iPhone 3G S via www.att.com/iPhone or by visiting one of 2,200 company-owned retail stores nationwide. Additionally, AT&T is now selling iPhone 3G starting at \$99 for new and qualifying subscribers.

Both iPhone 3G S and iPhone 3G offer free Wi-Fi access at more than 20,000 U.S. hotspots.

iPhone 3G S and iPhone 3G harness the power of nation's fastest 3G mobile broadband network, currently available in nearly 350 major U.S. metropolitan areas, with 20 more metropolitan areas on the way this year. In addition, AT&T has the best global coverage of any provider with roaming available in more than 200 countries and more world phones that work in more countries than any other carrier.

iPhone 3G S and iPhone 3G customers benefit from AT&T's continued investments to deliver the nation's best mobile broadband experience. AT&T is enhancing its mobile broadband coverage by adding nearly 2,100 new cell sites this year, and nearly doubling the wireless spectrum dedicated to 3G in most metropolitan areas to deliver stronger in-building reception. Also, AT&T is adding thousands of new cell site backhaul connections to support the higher mobile broadband speeds enabled by today's 3G and emerging 4G technologies.

iPhone 3G S will be compatible with High Speed Packet Access (HSPA) 7.2 technology, which offers theoretical peak download speeds of up to 7.2 Mbps, though actual speeds will vary as these capabilities become available. AT&T plans to begin deploying HSPA 7.2 later this year, with completion expected in 2011.

As a provider to all of the Fortune 1000, AT&T is actively marketing iPhone 3G S and iPhone 3G to businesses of all sizes.
