

AT&T Smart Wi-Fi Extender

A simple setup guide

You need to have AT&T Internet service for your new Wi-Fi Extender to work. Check the compatibility with your Gateway at att.com/wifixtender

Easy setup method

- 1 Download the Smart Home Manager app at att.com/smarthomemanager

For quick setup, scan the QR code with the camera on your smartphone.

- 2 Sign in with your User ID and Password.
- 3 Select **“Tools”** or **“Assistant.”**
- 4 Select or say **“Install Smart Wi-Fi Extenders.”**

Wi-Fi Extender

Power cord

Ethernet cable (optional)

The Smart Home Manager app

Smart Home Manager helps you manage your home network from pretty much anywhere. In addition to setting up your Extenders, you can check your Wi-Fi® connection strength, see what devices work on your network, set up parental controls, and more.

Note: AT&T Smart Home Manager is available to AT&T Internet service customers with a compatible AT&T Wi-Fi Gateway. Features may depend upon Gateway models. Data rates may apply for download and usage.

How to know your Wi-Fi Extender is working

- **Solid green** = Paired and functioning

Use AT&T **Smart Home Manager** app to see if Extender is on your network (*visible in the Devices section or through the Assistant*).

Troubleshooting

Your AT&T Internet service needs to be active.

Flashing red = Out of range
Move Extender closer to Gateway or another connected Extender.

Solid red = Not paired
Try to pair with WPS or use included Ethernet cable to connect Extender to Gateway and pair manually. See alternate setup method.

Blinking amber = Software updates
Don't move the Extender or turn it off.

Check all cables and cords to ensure connection.

Unplug power from Gateway for 15 seconds, then plug back in. Do the same with Extender. It may take 10 minutes for Gateway or Extender to reboot.

Alternate setup method

1. POWER UP Plug in power cord to Extender and then plug into outlet near Gateway. Push button on back and **watch** for light to blink **GREEN**.

2. PAIR Press and release WPS button on Gateway, then **press** and release WPS button on Extender. **Wait** three minutes for solid **GREEN** light.

Your Ethernet cable may be connected directly to the Gateway in place of the WPS method for pairing.

3. PLACE Unplug Extender from outlet. **Move** it (40 ft., two walls max., and, for best results place it up off the floor) between Gateway and area you want a stronger signal. **Plug** Extender into outlet and wait for **GREEN** light.

Tip: Make sure both the 2.4GHz and 5GHz radio bands are enabled on the Gateway and with the same SSID. For help, use the Smart Home Manager app or go to att.com/enhancedwifi
