Tune in to your local scene.

Local Channel Connector
Quick Start Guide

Enjoy your local channels—
including news, weather, live sports
and more—with this Local Channel
Connector. It’s yours to keep!

Before you begin,
find the perfect spot.
To get the best reception, your antenna
needs to be in a place where it can get a
signal from the nearest broadcast tower.
On or near a window is best. Make sure
the area is free from obstructions or
interference from other devices.

After it’s set up, you may need to test it in
several places to find the best location.

Note: Use the supplied mounting strips
to secure your antenna in place.

Simple safety tips:
Make sure to read and follow
these safety instructions. You
should keep them for reference.

✔ Do not use near water or heat
sources. (Clean only with a dry cloth.)
✔ Do not block ventilation openings.
✔ Use only attachments and
accessories included in your kit
or specified by the manufacturer.
✔ You may want to unplug it during
lightning storms or when not
in use for long periods of time.
✔ Make sure you have easy access
to the power cord, but protect it
from being walked on, or pinched.
Do not alter it in any way.
✔ The Local Channel Connector may
be hot to touch. Be careful!

This Local Channel Connector may not be ideal for all situations,
like if you live more than 50 miles away from the nearest broadcast
signal tower. Signal strength in your area may vary. DIRECTV is not
responsible for over-the-air local broadcasting signal strength.

Local Channel Connector (LCC): Receiving local channels
over the air requires use of antenna. On Demand features only
available to DIRECTV customers who receive local channels via
satellite. Channel availability varies by location. DIRECTV is not
responsible for local programming or signal strength. Signal
strength may vary. Installation fee may apply. Maintenance,
replacement and repair not included.
A few simple steps, and you’re up and running

Give yourself about 30 minutes for setup, and be aware that your recordings will be interrupted during the process.

1. Connect Antenna Splitter to power
   After locating an ideal spot and mounting your Antenna, connect it to the white Antenna Power Adapter using the USB Cable, then plug it into an electrical outlet.

2. Connect Coax Cable
   to the Local Channel Connector.

3. Connect Local Channel Connector
   to your primary DIRECTV receiver and to the black LCC Power Adapter and then plug it into an electrical outlet. (The Adapter’s blue LED will light up to indicate power.)
   **Note:** the Local Channel Connector is not compatible with Genie Minis.

4. Follow on-screen instructions
   If the New Over-the-Air Tuner Found message doesn’t appear after 5-10 seconds, see the Troubleshooting section.

To watch your local channels, just tune to them as you normally would.

Helpful Hint:
You should rescan your over-the-air channels at least once a month to find available channels including newly added or changed ones.
