A "WEA-Capable device" complies with all of the requirements in 47 CFR 10.10(k), including:

* 360-character messages.

* Support for Spanish alerts if the agency initiating the alert provides a Spanish version. To receive a Spanish alert (along with an English alert), select your preferred language as Spanish or enable the Spanish Alert option under WEA setting menu on your wireless device.

* All alert types (National, Imminent Threat, Amber), plus state or local test messages initiated by state and local emergency managers to test the WEA system to members of the public.

* Enhanced geographic targeting. You'll only get an alert if you're in an impacted area specified by the emergency alert originator. To determine if you are in an area impacted by a WEA alert, the alert will use the location capabilities of your mobile device, along with the impacted area in the WEA alert. In some circumstances, such as your device location can't be determined, you may get the alert outside the impacted area.
