

AT&T Secure Family[™] Network vs. GPS Location Detail

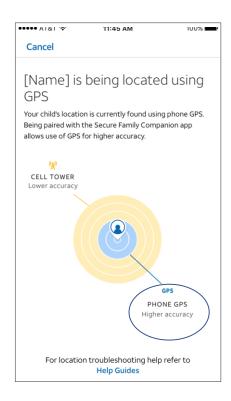

6/22/2020

Effective with the 10.13.1 update for Android and 3.10.1/1.10.1 update for iOS

These steps apply to all Secure Family customer types

GPS vs. Network Location Indicator: What's the Difference?

The **GPS** indicator* delivers higher location accuracy (inner blue circles).

••••• AT&T **奈** 11:45 AM 100% Cancel Pair [Name]'s phone for higher location accuracy Your child's location is currently found using cell towers. Pair [name]'s phone using the Secure Family Companion app to use GPS for higher accuracy. CELL TOWER Lower accuracy PHONE GPS Pair with child's phone to get higher accuracy Pair to get GPS

The Cell Tower Indicator or Network delivers a cell tower triangulation location result. Usually, these types of location results are less accurate than GPS location results depending on where you live (outer yellow circles).

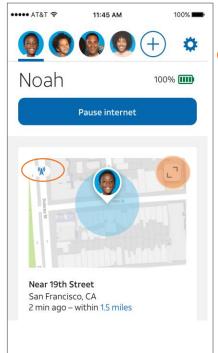

Cell Tower location accuracy is the default when the child's device is not paired

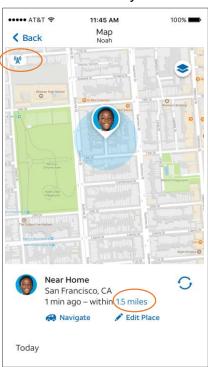

^{*} You must pair the child device to get GPS location accuracy
