IMPORTANT SAFETY INSTRUCTIONS

1) Read these instructions.
2) Keep these instructions.
3) Heed all warnings.
4) Follow all instructions.
5) Do not use this apparatus near water.
6) Clean only with dry cloth.
7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11) Only use attachments/accessories specified by the manufacturer.
12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13) Unplug this apparatus during lightning storms or when unused for long periods of time.
14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as a power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

Power Source Warning
A label on this product indicates the correct power source for this product. Operate this product only from an electrical outlet with the voltage and frequency indicated on the product label. If you are uncertain of the type of power supply to your home or business, consult your service provider or your local power company. The AC inlet on the unit must remain accessible and operable at all times.

Ground the Product

WARNING: Avoid electric shock and fire hazard! If this product connects to cable wiring, be sure the cable system is grounded (earthed). Grounding provides some protection against voltage surges and built-up static charges.

Protect the Product from Lightning
In addition to disconnecting the AC power from the wall outlet, disconnect the signal inputs.

Verify the Power Source from the On/Off Power Light
When the on/off power light is not illuminated, the apparatus may still be connected to the power source. The light may go out when the apparatus is turned off, regardless of whether it is still plugged into an AC power source.

Eliminate AC Mains Overloads

WARNING: Avoid electric shock and fire hazard! Do not overload AC mains, outlets, extension cords, or integral convenience receptacles. For products that require battery power or other power sources to operate them, refer to the operating instructions for those products.
Provide Ventilation and Select a Location

- Remove all packaging material before applying power to the product.
- Do not place this apparatus on a bed, sofa, rug, or similar surface.
- Do not place this apparatus on an unstable surface.
- Do not install this apparatus in an enclosure, such as a bookcase or rack, unless the installation provides proper ventilation.
- Do not place entertainment devices (such as VCRs or DVDs), lamps, books, vases with liquids, or other objects on top of this product.
- Do not block ventilation openings.

Protect from Exposure to Moisture and Foreign Objects

**WARNING:** Avoid electric shock and fire hazard! Do not expose this product to dripping or splashing liquids, rain, or moisture. Objects filled with liquids, such as vases, should not be placed on this apparatus.

**WARNING:** Avoid electric shock and fire hazard! Unplug this product before cleaning. Do not use a liquid cleaner or an aerosol cleaner. Do not use a magnetic/static cleaning device (dust remover) to clean this product.

**WARNING:** Avoid electric shock and fire hazard! Never push objects through the openings in this product. Foreign objects can cause electrical shorts that can result in electric shock or fire.

Service Warnings

**WARNING:** Avoid electric shock! Do not open the cover of this product. Opening or removing the cover may expose you to dangerous voltages. If you open the cover, your warranty will be void. This product contains no user-serviceable parts.

Check Product Safety

Upon completion of any service or repairs to this product, the service technician must perform safety checks to determine that this product is in proper operating condition.

Protect the Product When Moving It

Always disconnect the power source when moving the apparatus or connecting or disconnecting cables.
Change the Way You Watch TV

Welcome to U-verse TV. The IPN330HD, IPN430MC, and IPN4320 devices, known as U-verse receivers, bring a rich, new set of interactive services directly to you through your TV and your in-home IP network. The receiver uses the existing in-home coaxial cable wiring and connects to most entertainment devices.

Available services may include some or all of the following features:

- Digital Video Recorder (DVR) – Allows you to record your favorite programs so that you can still go to your friend’s house for dinner and not miss your favorite TV show
- Pause Live TV – Allows you to pay for the pizza and come back to the show where you left it. (Applies to DVR models only)
- High-Definition (HD) – Provides crystal-clear pictures and sound when compared to standard-definition – you won't want to watch television any other way once you’ve experienced HD
- Video-On-Demand (VOD) – Gives you access to a robust library of movies and programs that you can watch – when you want to watch them

Note: Contact your service provider to find out if the DVR, HD, or VOD services are available and to activate the services.

What’s In the Carton?

In addition to this installation manual, the receiver carton contains the following items:

- An IPN330HD Receiver - TV receiver that supports high-definition (HD) and standard-definition (SD) video decoding. Supports 480i, 720p, and 1080i content. Uses Ethernet over CAT-5 or HPNAv3 in-home networking over coaxial or twisted-pair
- An IPN430MC Receiver - The IPN430MC is the same as the IPN330HD but also includes digital video recorder (DVR) capability with a 160 GB hard disk drive
- An IPN4320 Receiver - The IPN4320 is the same as the IPN430MC but with a 320 GB hard disk drive

- A power cord and power adapter

Safety First

Before using the receiver, read the Important Safety Instructions section of this manual.

Identify Your Receiver with the Serial Number

At times your service provider may ask for the serial number. To find the serial number for your receiver, look on the bottom of the receiver for the label. The serial number is a 9-digit numeric code to the right of the letters “S/N” on the label.

Use the space provided here to record the serial number: _________________________________
In This Manual
This manual covers the information you need to connect your receiver to both your in-home IP network and your entertainment system. The manual also outlines certain safeguards and installation information. The safety information contained in this manual was developed and provided solely by the receiver manufacturer, Cisco Systems, Inc.

Questions About Your Service
For questions about how to operate your receiver, once installed, refer to your Feature Guide available for download at:  uverse.att.com/support. For all other questions about your TV service, contact your service provider.
Front Panel

1 Power
   Turns the receiver on or places it in standby. To restart the receiver, press and hold the POWER button for 10 seconds. The LED is green.

2 Model Number
   Identifies the model number of your receiver as IPN330HD, IPN430MC, or IPN4320.

3 Link
   Indicates network link status. The LED is green.

4 HD
   Indicates the set-top is set to a resolution of 720p or 1080i. The LED is blue.

5 Record
   Indicates that a recording is in progress. The LED is red.

6 IR Sensor
   Receives the infrared signal from the remote control. The sensor is behind the front panel.

7 Menu
   Accesses the on-screen menu.

8 Arrow Keys
   Accesses on-screen services (such as the on-screen guide, video-on-demand, or pay-per-view) and navigates menus.

9 OK
   Selects the current item.

10 USB Port
   USB connector. (Reserved for future use).

Note: This illustration may vary from the actual product.

---

**CAUTION:**

Your receiver may be equipped with a hard disk drive to store programs that you record and to allow you to rewind and pause live TV. Any time the receiver is powered on (power LED is illuminated) or a recording is in progress (the record LED is illuminated) the hard disk drive is in use.

If you need to move the receiver, complete the following steps to allow the hard disk drive to shut down properly. First, make sure that no recording is in progress (record LED is off). Then, turn off power by pressing the Power key. Finally, unplug the unit and wait 10 seconds for the hard disk drive to spin down (stop). At this point the unit can be moved safely.

You should handle this product with the same level of care you would use when handling other electronics containing a hard disk drive, such as a laptop computer or other hard disk drive-equipped devices.
1 Network
Connect to the Ethernet (CAT-5) network at your home, if applicable

2 USB Port
USB connector. (Reserved for future use)

3 HDMI
Connect an HDTV HDMI™ (High-Definition Multimedia Interface) cable from the HDTV to the HDMI port. HDMI supports both digital audio and video. See page 12 for more information

4 YPbPr
Connect the receiver to the component video input (YPbPr) on the HDTV. See pages 12 and 13 for more information

5 S-Video
Connect an S-Video cable to send an S-Video signal to your TV, VCR, or DVD recorder. This signal is standard-definition but higher quality than other standard-definition TV connections. See page 13 for more information

6 Video Out
Connect to composite input on your HDTV or SDTV
Note: Two video output connectors are provided. Typically, one output is connected to the TV, and the other output is used to connect to a home theater system, DVD recorder, or VCR

7 Audio Out (L/R)
Connect RCA-type cables to Audio Out to send analog audio signals (left and right) to a TV with stereo inputs or to a stereo amplifier
Note: Two sets of audio out connectors are provided. Typically, one set of outputs is connected to the TV, and the other set is used to connect to a home theater system, DVD recorder, or VCR

8 Optical
Connect an optical cable to send a digital audio signal to a surround-sound receiver or other digital audio device

9 To TV (Video Out)
Connect to TV. You must set the channel on your TV to the channel designated by your service provider (usually channel 3). Contact your service provider for the channel information

10 To Wall (Video In)
Connect the receiver to in-house coaxial wiring, if applicable

11 Power
Connect the DC output of the AC power adapter (provided) to deliver power to the receiver

Note: This illustration may vary from the actual product.
Connecting the Receiver

To connect your receiver to your network and home entertainment devices, complete these steps.

1. Because the connections for a high-definition (HD) or standard-definition (SD) TV are different, you must determine if your TV is HD or SD. Your TV must receive HD signals for you to enjoy the benefits of HDTV. Refer to the manual that came with your TV for more information. See page 26 for more information on picture formats.

2. Make one of the following connections for your home network:
   - If your home network uses coaxial cable, use the TO WALL connector on the receiver. See page 11.
   - If your home network uses twisted pair cable (phoneline wiring), use the TO WALL connector on the receiver and an adapter that converts twisted pair to coaxial. See page 11.
   - If your home network uses Ethernet (CAT-5) cable, use the NETWORK connector on the receiver. See page 11.

3. Make the connections for your TV, VCR, and DVD recorder as follows:
   - If you are using an HDTV, see page 12 and the connection diagrams in this manual.
   - If you are using a standard-definition TV, see page 13 and the connection diagrams in this manual.
   - If you want to record some programs on VCR tape or DVD, see page 14 and the connection diagrams in this manual.

4. Identify the additional consumer electronic devices you will connect to the receiver and TV. See pages 15 through 23 and refer to the owner’s manual for the device.

5. Plug the receiver and the TV into an AC power source that is not controlled by a switch. For further instructions on completing your setup, refer to the Feature Guide available from your service provider.
Connecting to the In-Home Network

The following diagrams illustrate examples of the connections you can use to connect your receiver to your in-home network. Contact your service provider for the recommended connection method for your home.

**Notes:**
- The in-home coaxial and phoneline wiring networks use HomePNA 3.1 technology.
- The illustrations below may vary from the actual product.
Connections for a High-Definition TV (HDTV)

To use the receiver with an HDTV, you must make one of the following connections to view the HD content. Refer to the owner’s manual for your TV and the cabling diagrams in this manual for more detailed connection information.

Although all connections provide you with quality service, we list the connections in our recommended order.

Notes:
- The labeling on your receiver or HDTV may vary slightly from the illustrations shown below.
- Some cables shown in the connection diagrams may not be included with this receiver.
- Set the HD mode and select the output video format (480i, 720p, 1080i) on the receiver using the instructions provided in the Feature Guide available for download at: uverse.att.com/support

| Connecting an Over-the-Air Converter Box

You can connect an over-the-air converter box directly to your TV to receive certain local channels, but do not connect the over-the-air converter box directly to your receiver.
Connecting to an HDTV with an HDMI Connector

Cable Used in this Configuration
- 1 HDMI Cable

Notes:
- The HDMI port on the TV must support high-bandwidth digital content protection (HDCP).
- The HDMI interface supports Dolby™ Digital 5.1 audio.

WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to an HDTV with a DVI Connector

Cables Used in this Configuration

- 1 HDMI-to-DVI Cable or 1 HDMI Cable and 1 HDMI-to-DVI Adapter
- 1 Audio Left/Right Cable (You can also use an optical cable [indicated by the dotted line] instead of the Audio Left/Right Cable as shown in the diagram, dependent upon your TV’s capabilities.)

Notes:

- The DVI port on the TV must support high-bandwidth digital content protection (HDCP).
- When you connect the HDMI connector to the DVI connector on your HDTV, you need an HDMI-to-DVI adapter and a separate audio connection.

WARNING:

Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to an HDTV with Component (YPbPr) Connectors

Cables Used in this Configuration
- 1 Component Video Cable (YPbPr)
- 1 Audio Left/Right Cable (You can also use an optical cable [indicated by the dotted line] instead of the Audio Left/Right Cable as shown in the diagram, dependent upon your TV’s capabilities.)

⚠️ WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to an SDTV with Component (YPbPr) Connectors

Cables Used in this Configuration
- 1 Component Video Cable (YPbPr)
- 1 Audio Left/Right Cable

Note: The receiver must be set to the proper standard-definition mode.

⚠️ WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.

Receiver

Back of SDTV
Connecting to an SDTV with an S-Video Connector

Cables Used in this Configuration

• 1 S-Video Cable
• 1 Audio Left/Right Cable

⚠️ WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to an SDTV with an RCA-Type Connector

Cables Used in this Configuration

- 1 RCA-type Video Cable
- 1 Audio Left/Right Cable

⚠️ WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to an SDTV with a Coaxial Cable

Cable Used in this Configuration
- 1 Coaxial Cable

Note: You must set the channel on your TV to the channel designated by your service provider (usually channel 3). Contact your service provider for the channel information.

WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to a Home Theater System with Component (YPbPr) Connectors

Cables Used in this Configuration

- 1 Component Video Cable (YPbPr)
- 1 Audio Left/Right Cable (You can also use an optical cable [indicated by the dotted line] instead of the Audio Left/Right Cable as shown in the diagram.)

Notes:

- This connection requires that audio is provided by the home theater system.
- Consult the user guide that came with your home theater system for information on connecting your other video and audio devices.

Contact AT&T ConnecTech® service to learn about affordable flat-rate home theater installation services. Call (800) 344-1734 to speak with an AT&T ConnecTech Representative. (Not available in all areas; See offers and terms & conditions at www.att.com/ConnecTech).

![Diagram of a Home Theater Receiver with Component (YPbPr) Connectors]

**WARNING:**

Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.
Connecting to a Stereo VCR or DVD Recorder (optional)

The diagram below shows how to connect a recording device to your receiver. Although it is possible to watch TV using a connection through your VCR or DVD recorder to the TV, this connection may not provide the best picture, and HDTV users are restricted to an SD format. In addition, some content is copy protected and passing this content through the recording device may result in a picture that cannot be viewed.

For these reasons, the connection shown is best used to provide only video and audio to your recording device and not for normal TV viewing. The connection from the recording device to the TV (only used for playback of recorded material) depends on the type of device being used, the outputs that are supported, and the inputs that remain available for use on your TV.

Consult the owner’s manuals provided with your TV and recording device for more details on connection options.

Cables Used in this Configuration

- 1 RCA-type Video Cable
- 1 Audio Left/Right Cable

⚠️ WARNING:
Electric shock hazard! Unplug all electronic devices before connecting or disconnecting any device cables to the receiver.

Connecting your TV directly to the Audio/Video output of your receiver will assure a more vivid picture and enhance your viewing enjoyment.
Troubleshooting
If the receiver does not perform as expected, the following tips may help. If you need further assistance, contact your service provider.

No Picture
• Verify that the power to your TV is turned on.
• If the receiver is plugged into a wall switch, verify that the switch is in the ON position.
• Verify that all cables are properly connected.
• If your system includes a VCR, DVD recorder, or stereo, verify that you have properly connected the device to the receiver.
• Verify that you are using the proper input selection to the home theater receiver or TV.
• Verify that the receiver is set to the proper screen type and resolution.
• If you are using coaxial cable to connect to your TV, verify that the TV is tuned to the channel designated by your service provider (usually channel 3). Contact your service provider for the channel information.

No Color or Incorrect Color
• Verify that the current TV program is broadcast in color.
• Adjust the TV color controls.
• If you are using a component video connection (YPbPr), check that all connectors are completely and properly plugged into the receiver and TV.
• If you are using a component video connection (YPbPr) and your HDTV has only RGB or RGB-HV connectors, you must use an adapter. You can obtain the adapter through an electronic parts retailer.

No Sound
• If your setup includes a VCR, DVD recorder, or stereo, verify that you have properly connected the device to the receiver.
• Verify that the volume is turned up.
• Verify that the mute function is not on.
• Verify the proper input selection to the home theater receiver or TV.
• If you are using coaxial cable to connect to your TV, verify that the TV is tuned to the correct channel.

Avoid Screen Burn-In
Images such as letterbox bars or side bars, bright closed-captioning backgrounds, station logos, or any other stationary images may cause the display in your HDTV to age unevenly; this is known as screen burn-in. Refer to the owner’s manual that came with your HDTV for more information.

⚠️ CAUTION:
Avoid screen burn-in.
Do not display the same fixed images on your HDTV screen for extended periods of time.
Frequently Asked Questions

What Is Digital Television?
Digital television (DTV) is a huge leap forward in television technology compared to analog television that has been widely available since the 1940s. DTV is delivered and displayed using digital encoding, similar to the way a PC operates. By using digital technology, there is no variation in picture and sound quality from the origination point until it is displayed on your television. You always receive a high-quality picture without the wavy lines or static you might sometimes get from a weak analog signal. Another feature of digital television is digital surround sound using Dolby Digital technology, which is the same technology used to produce the sound you hear in movie theaters.

What Is Standard-Definition Television?
Standard-definition television (SDTV) is basic digital television programming delivered by your service provider. Typically, the SDTV screen is the same, nearly square shape as an analog television screen. Digital images on an SDTV set are crisp and clear—noticeably better than on a standard analog television set using an antenna to receive over-the-air signals.

What Is High-Definition Television?
High-definition television (HDTV) is a completely new way to send and receive television broadcast signals. HDTV images are made up of pixels that are much smaller and closer together than those used in standard analog television, and there are millions of them. Thus, HDTV can display five to six times the detail of analog television to deliver picture quality that is much more realistic, dimensional, and precise. SDTV programs can be viewed on an HDTV.

Are Local TV Stations or Other Programmers Broadcasting in HDTV?
Many local TV stations and programmers are transmitting digital signals. However, transmitting a digital signal does not mean transmitting an HDTV signal. Some stations are using the new bandwidth to broadcast several standard-definition channels. Most stations and programmers, once they begin broadcasting in digital, are offering HD content from their parent network (for example, CBS, ABC, NBC, Fox, and PBS). Contact your service provider for more information.

Why Aren’t All the Shows I Watch in High-Definition?
A high-definition program must originate in HD format and be broadcast in HD format. Having an HDTV system does not mean that everything you watch will be viewed in high-definition. Getting the signal from a digital source also does not mean it is high-definition.

Why Are Some HDTVs 4:3 Aspect Ratio and Others 16:9?
The aspect ratios differ because television manufacturers build both standard-screen and wide-screen HDTVs to appeal to consumer viewing preferences. The two aspect ratios are as follows:

- On standard-screen (4:3) HDTVs, the programming is displayed in letterbox format in the middle of the screen. There are bars surrounding the picture.
- On wide-screen (16:9) HDTVs, the programming is displayed on the full screen.

What Is HDMI and Does it Support Dolby Digital 5.1 Audio?
The High-Definition Multimedia Interface (HDMI) is an uncompressed, all-digital audio/video interface. The Dolby Digital audio format can provide up to 5.1 separate channels of surround sound, and is the standard used for DVD-Video. HDMI supports standard, enhanced, or high-definition video, plus multi-channel digital audio, such as Dolby Digital audio, on a single cable.
Picture Formats

What Is the Difference Between a Standard-Screen and a Wide-Screen HDTV?
The type of screen your HDTV has (wide-screen or standard-screen) determines how the receiver displays programs on the screen. The picture format for an HDTV is a combination of aspect ratio and screen resolution and is different for standard-screen and wide-screen HDTVs.

What Is Aspect Ratio?
An aspect ratio is the ratio of the width to the height of the TV screen. The aspect ratios differ because the television industry manufactures both standard-screen and wide-screen HDTVs to appeal to consumer viewing preferences.

What Is the Screen Resolution?
The screen resolution indicates the amount of detail that the picture displays. Resolution is identified by the number of display lines on the screen. The techniques that an HDTV uses to “paint” the picture on the screen are referred to as progressive and interlaced.

With the progressive scanning method, the lines are drawn on the screen one at a time in sequential order. Progressive scanning results in a more detailed image on the screen and is also less susceptible to the flicker commonly associated with interlaced scanning. The interlaced method involves refreshing pixels in alternation — first the odd lines and then the even lines.

For advanced setup, select the screen resolution that your TV can support. Refer to your Feature Guide and HDTV owner’s manuals to choose the proper screen resolution (480i, 720p, 1080i) for your setup.

For example, a screen resolution of 1080i indicates that the screen shows 1080 lines in an interlaced display, and 720p indicates that the screens shows 720 lines in a progressive display.

<table>
<thead>
<tr>
<th>A standard-screen HDTV has a 4x3 aspect ratio. The screen is 4 units wide for every 3 units tall.</th>
<th>A wide-screen HDTV is one-third wider than a standard-screen HDTV. The screen is 16 units wide for every 9 units tall.</th>
</tr>
</thead>

United States FCC Compliance

This device has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against such interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment OFF and ON, the user is encouraged to try to correct the interference by one or more of the following measures:

- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the service provider or an experienced radio/television technician for help.

Any changes or modifications not expressly approved by Cisco Systems, Inc., could void the user's authority to operate the equipment.

The information shown in the FCC Declaration of Conformity paragraph below is a requirement of the FCC and is intended to supply you with information regarding the FCC approval of this device. The phone numbers listed are for FCC-related questions only and not intended for questions regarding the connection or operation for this device. Please contact your service provider for any questions you may have regarding the operation or installation of this device.

FCC Declaration of Conformity

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions: 1) the device may not cause harmful interference, and 2) the device must accept any interference received, including interference that may cause undesired operation.

IPN330HD, IPN430MC, or IPN4320 Receiver
Models IPN330HD, IPN430MC, or IPN4320
Manufactured by: Cisco Systems, Inc.
5030 Sugarloaf Parkway
Lawrenceville, Georgia 30044 USA
Telephone: 770-236-1077

Canada EMI Regulation

This Class B digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la class B est conforme à la norme NMB-003 du Canada.

20081121 FCC Standard

AVC VIDEO LICENSE

With respect to each AVC/H.264 product, we are obligated to provide the following notice:

THIS PRODUCT IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL AND NON-COMMERCIAL USE OF A CONSUMER TO (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD (“AVC VIDEO”) AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL AND NON-COMMERCIAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSE TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION MAY BE OBTAINED FROM MPEG LA, LLC. SEE http://www.mpegla.com.

Accordingly, please be advised that service providers, content providers, and broadcasters are required to obtain a separate use license from MPEG LA prior to any use of AVC/H.264 encoders and/ or decoders.

ENERGY STAR® Notice

Cisco has tested and confirmed that the IPN330HD, IPN430MC, and the IPN4320 set-top models meet the Tier 1 Energy Efficiency and Power Management Criteria specified in the ENERGY STAR Program Requirements for Set-top Boxes Version 2.0.

MACROVISION COPYRIGHT NOTICE

This product incorporates copyright protection technology that is protected by U.S. patents and other intellectual property rights. Use of this copyright protection technology must be authorized by Macrovision, and is intended for home and other limited viewing uses only unless otherwise authorized by Macrovision. Reverse engineering or disassembly is prohibited.

Trademarks

Cisco and the Cisco Logo are trademarks of Cisco Systems, Inc. and/or its affiliates in the U.S. and other countries. A listing of Cisco’s trademarks can be found at www.cisco.com/go/trademarks.
